

This is the homepage on mobile resolution

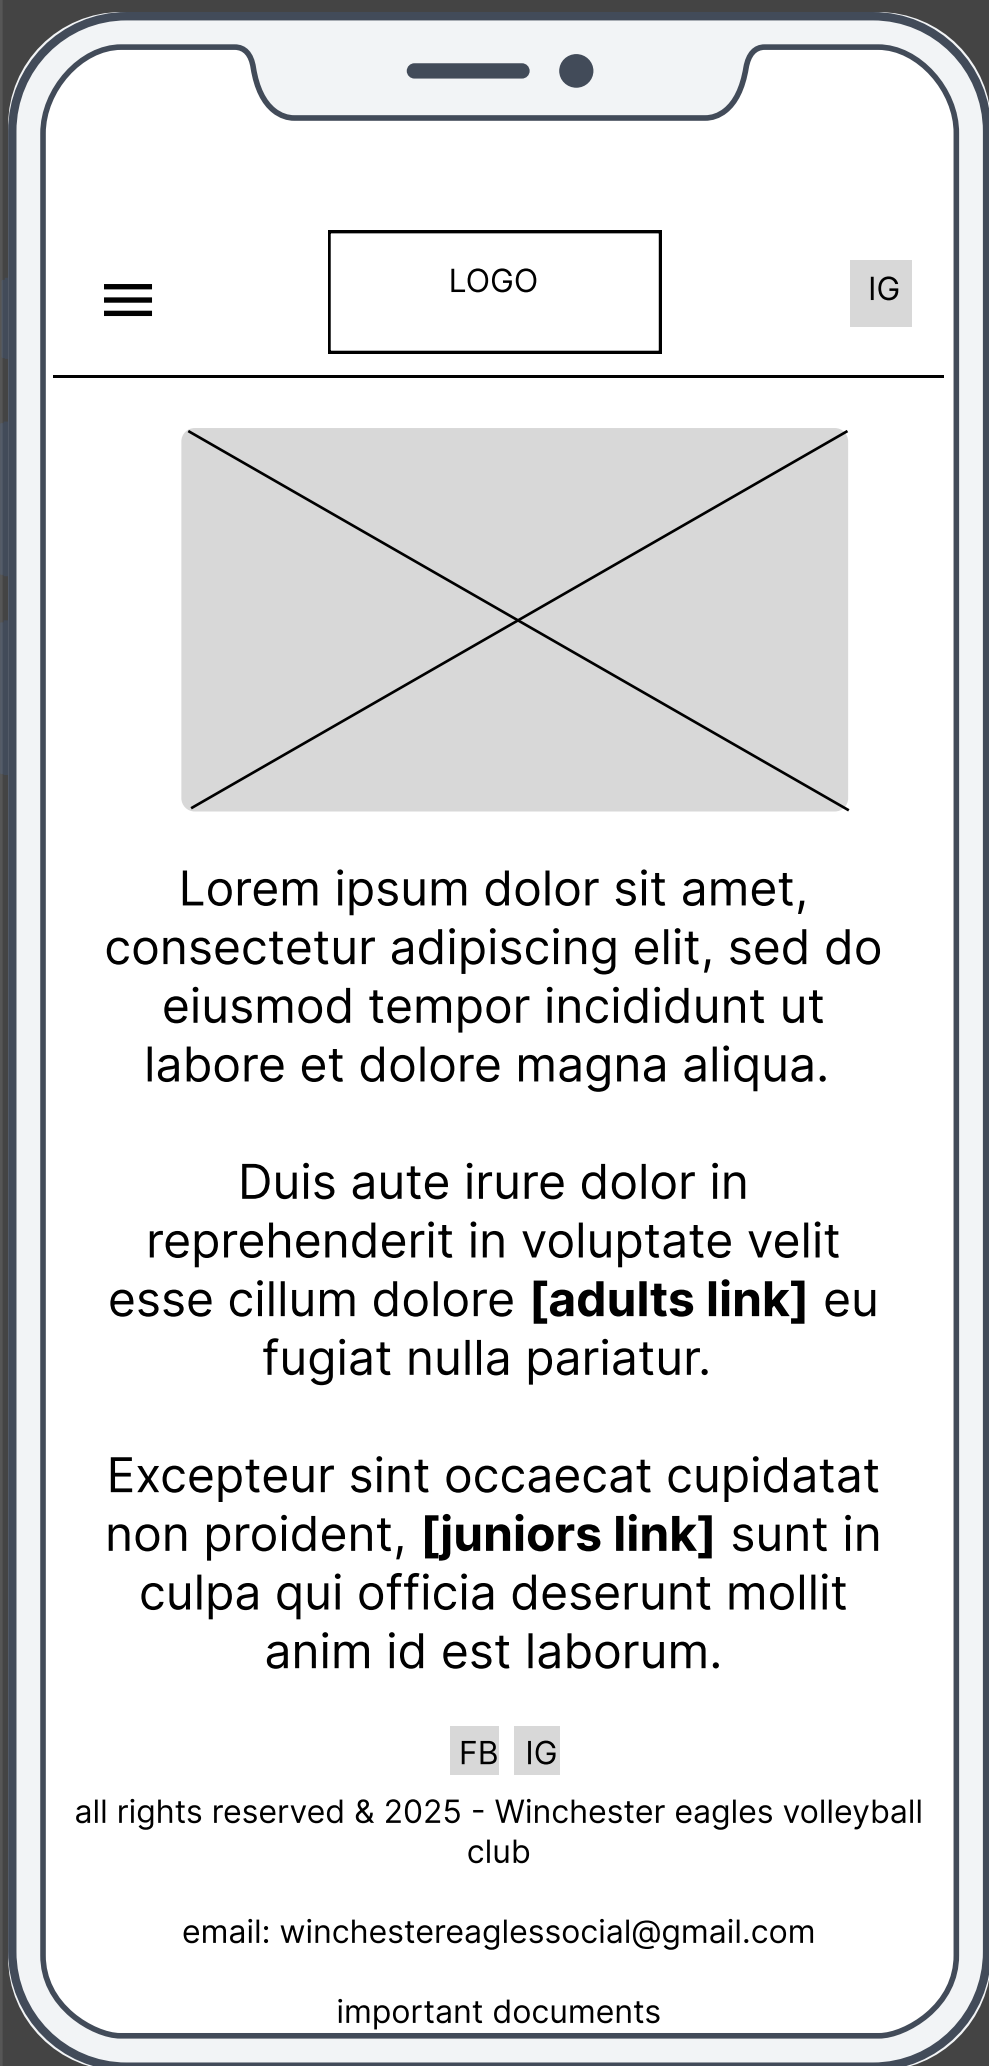

Hierarchy of information:

- Adults section (redirects to adults time table page)
- Junior section (redirects to juniors time table page)
- teams section (redirect to our teams pages)

I decided to prioritise information about adults and juniors' session because (due to personal experience) someone usually reaches the website with the precise intention of wanting to play volleyball (as opposed to just interest in the team).

so providing a clear direction to our timetables right away improves user experience.

This is the about us page on mobile resolution

it contains a description of the club, what we do, our aspirations etc.

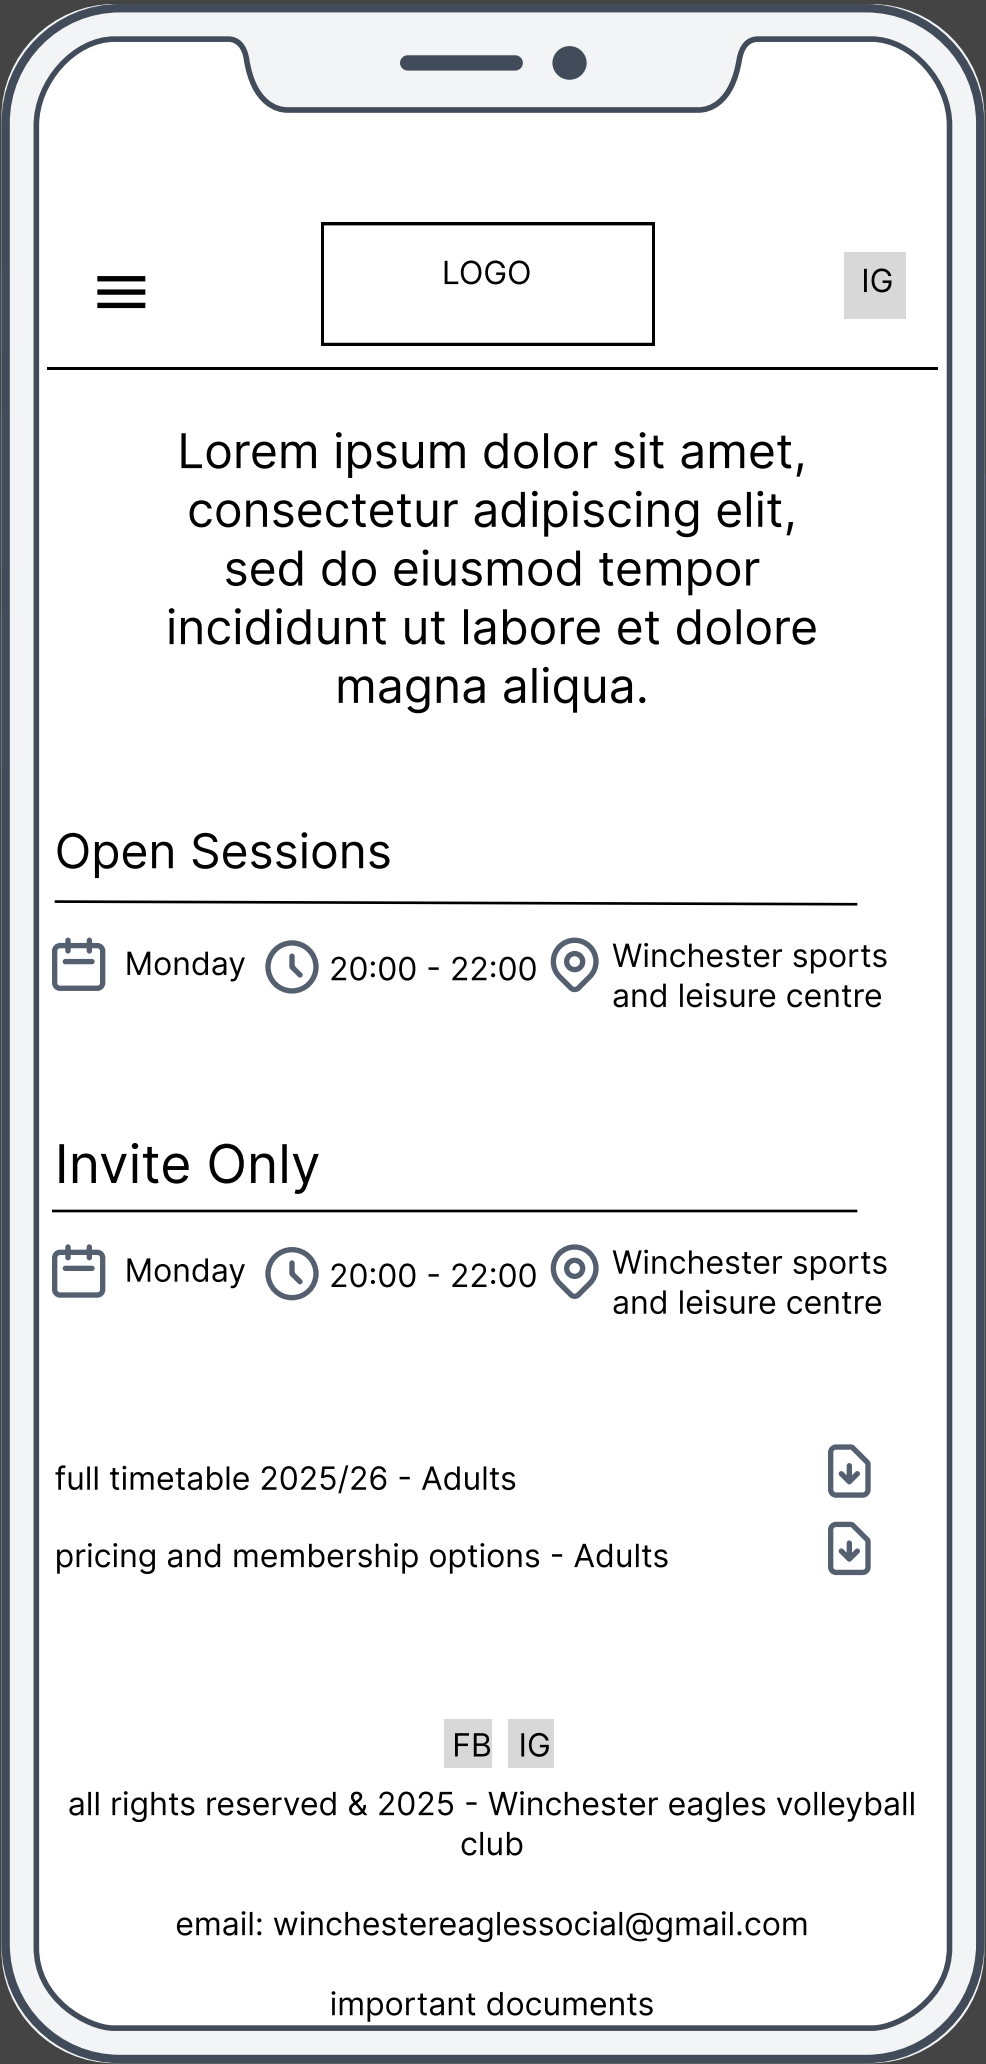

to reinforce the importance of our time table pages it would be nice to include:

- adults' paragraph (this includes info about our adults sector)
- juniors' paragraph (this includes info about our juniors sector)

as well as providing information about the club these two paragraphs offers the chance to include in-text link to the time tables pages.

this improves user experience by eliminating the extra step of clicking on the hamburger menu (or going back to the home page)

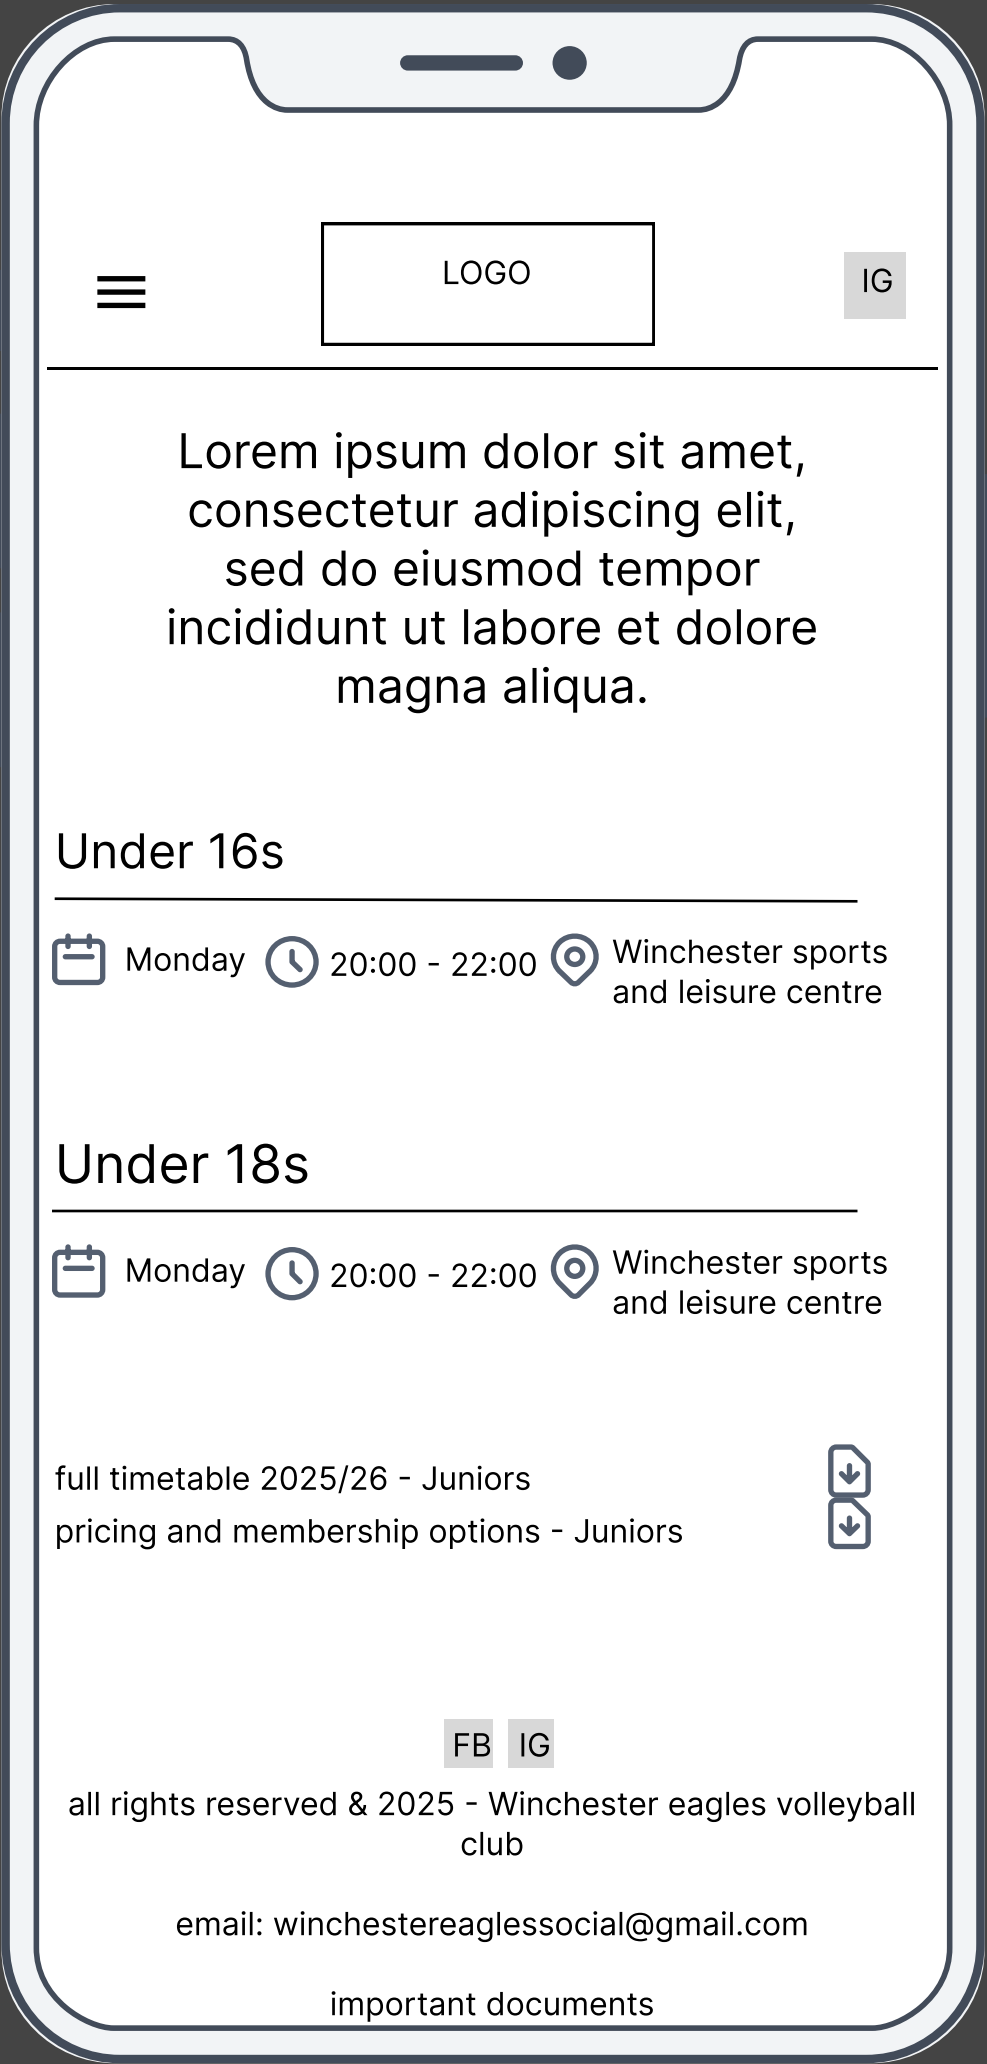

so an example user flow would be: - The user isn't sure our club is the right option, so instead of checking out the time tables right away (through homepage), he seeks more information by going to the about us page. if while reading, he now decides to check out the time tables, he is provided with the links right in the text

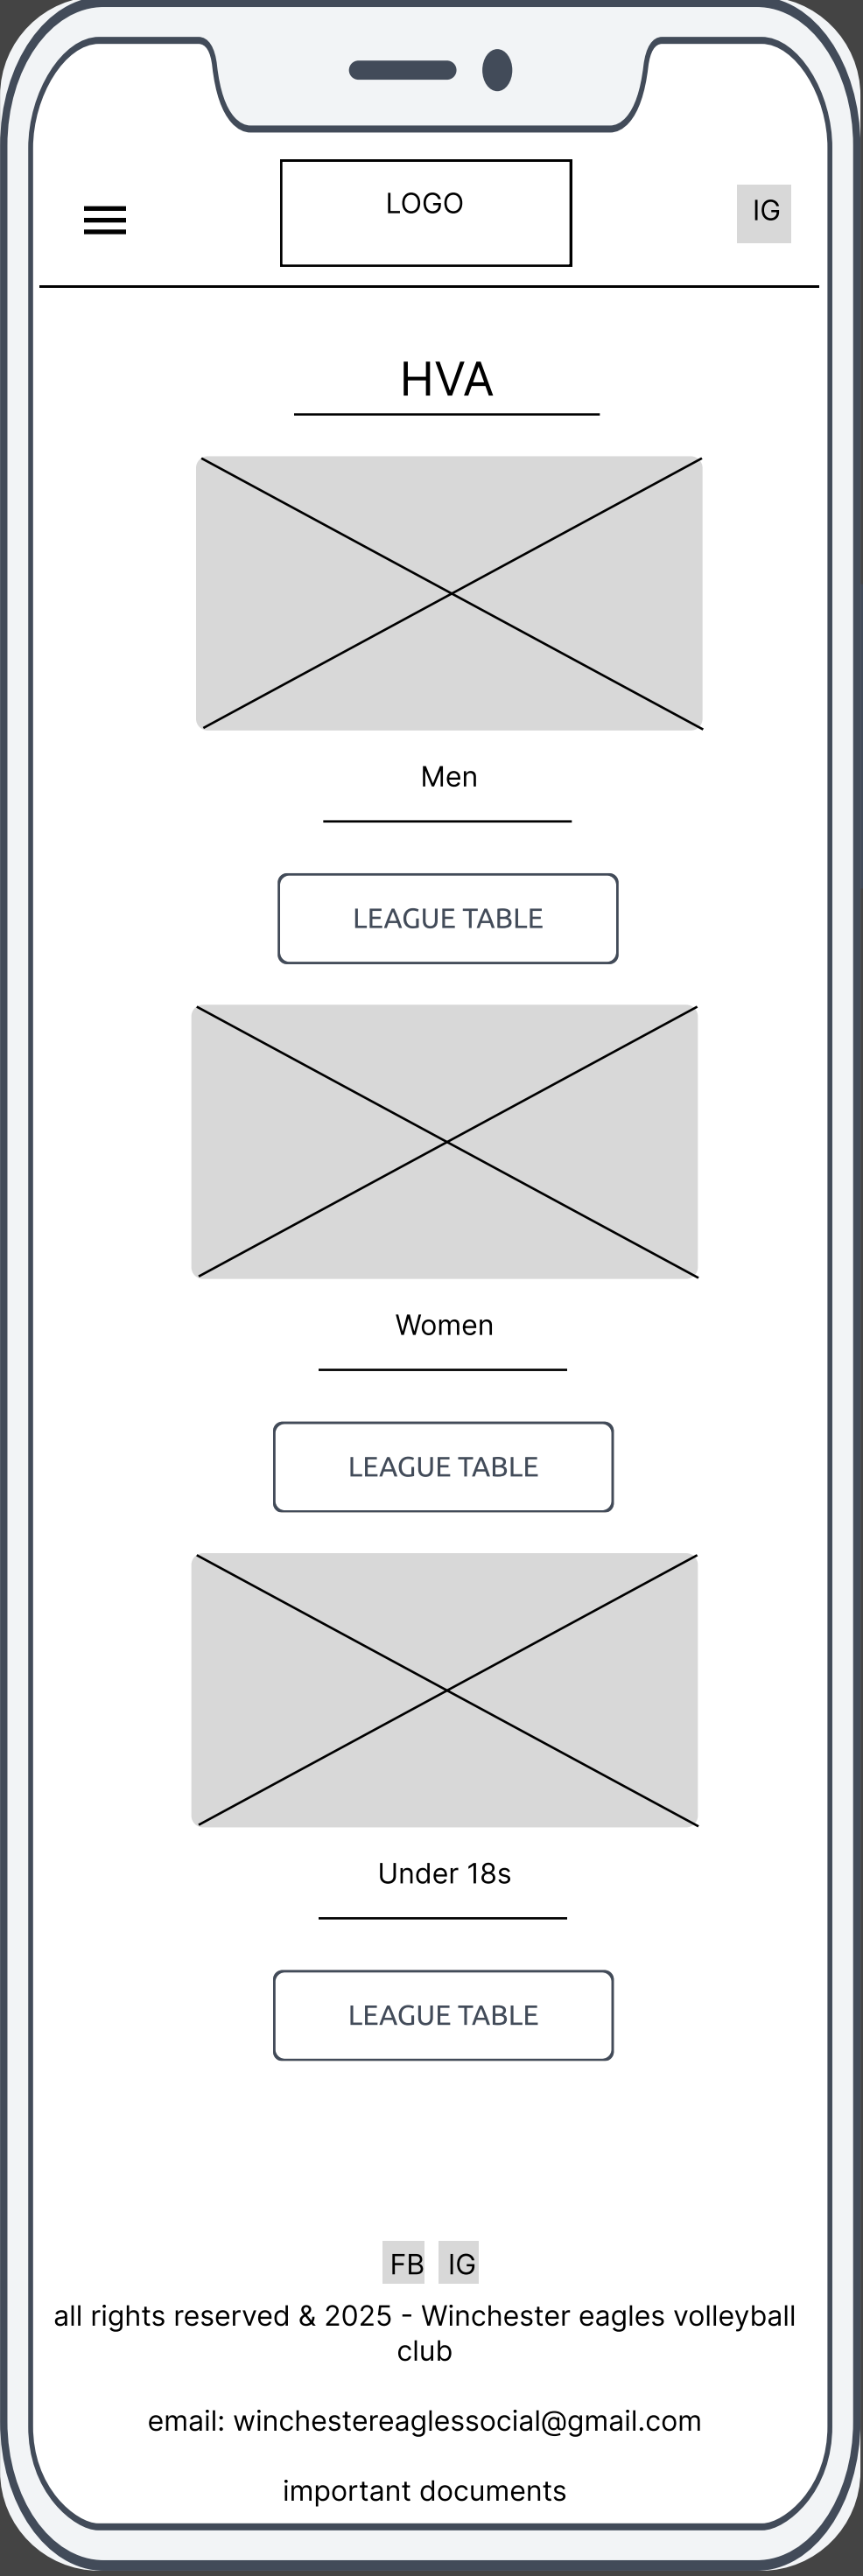

This is the adult sessions page on mobile resolution

At this stage the user intention is solely on gathering information, so images and any other design clutter has not been included

although both timetable and pricing documents are available under the “important document” page, contextual shortcuts are provided for improved flow

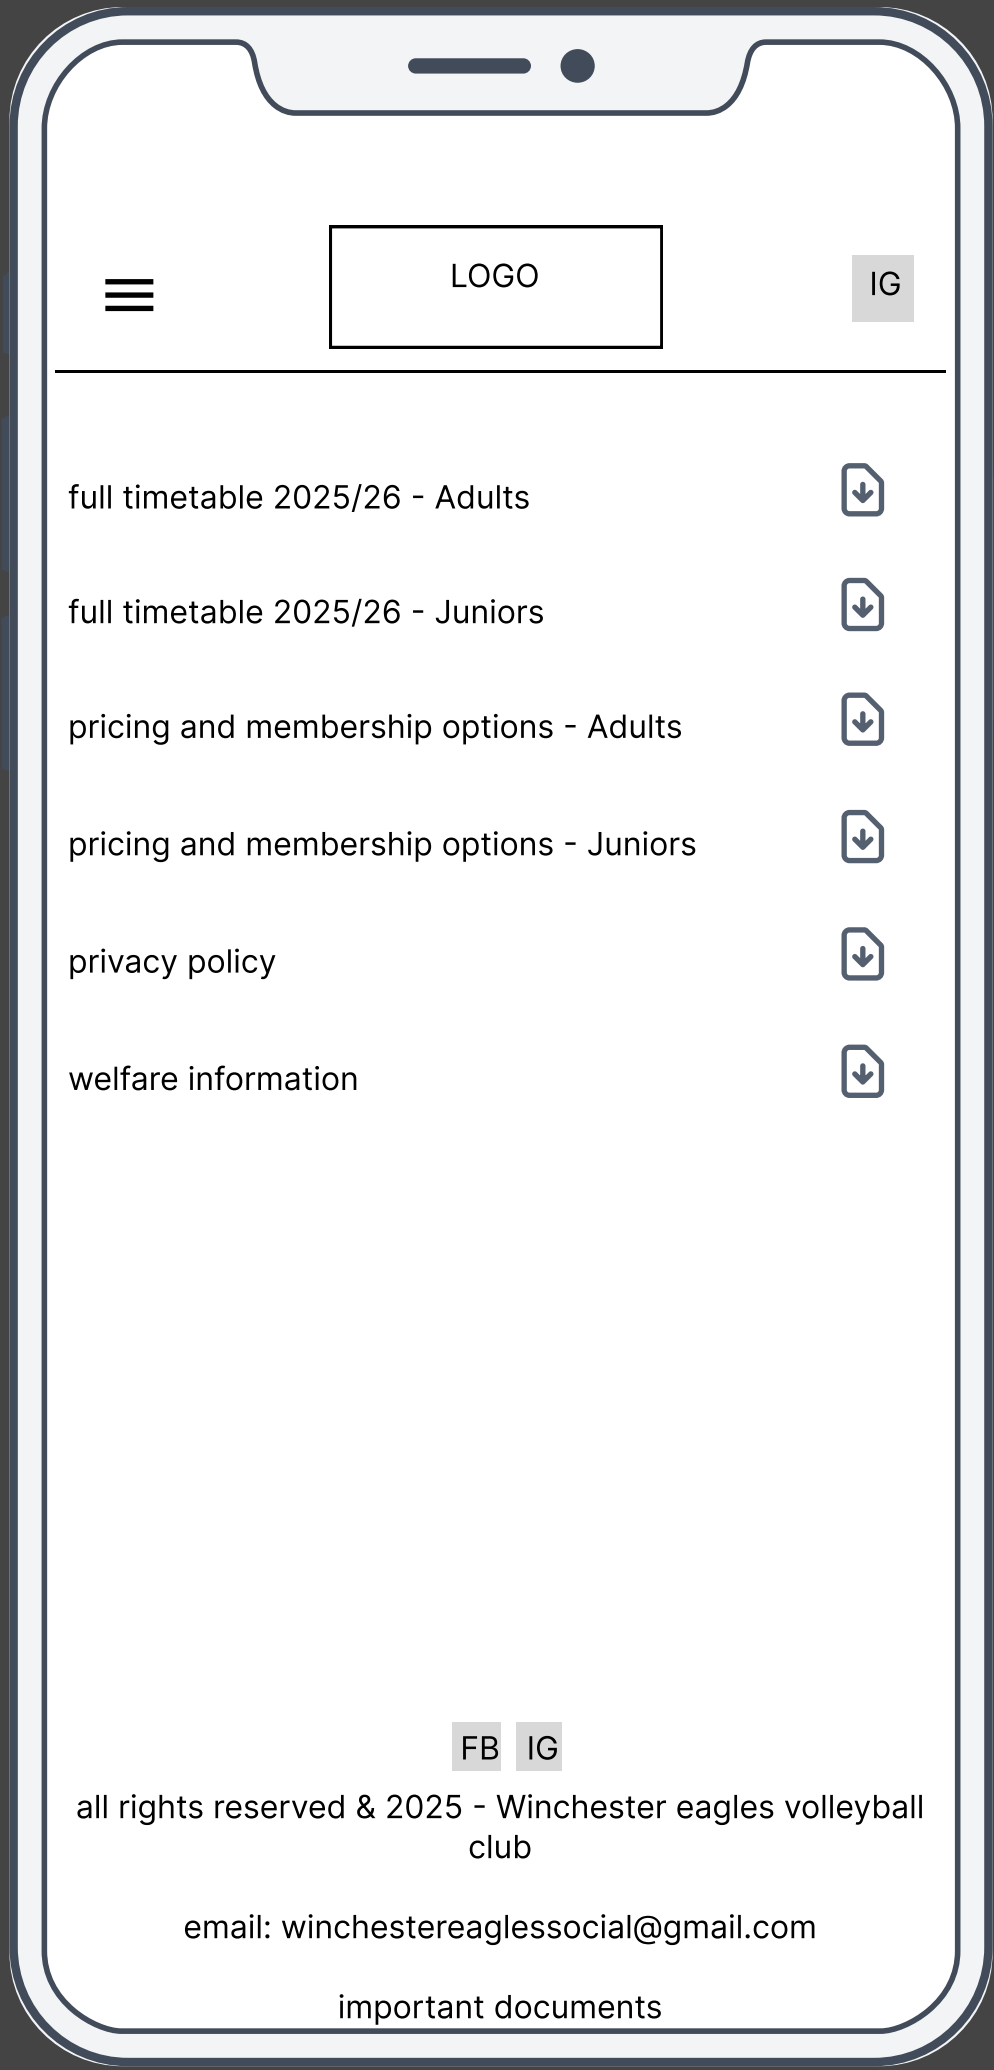

This is the Teams page on mobile resolution:

for each competition all teams are listed with:

- a picture of the team
- the link to the official table page

NOTE: i don't know what competitions juniors compete in but I've put them there just for show

This is the important documents page on mobile resolution

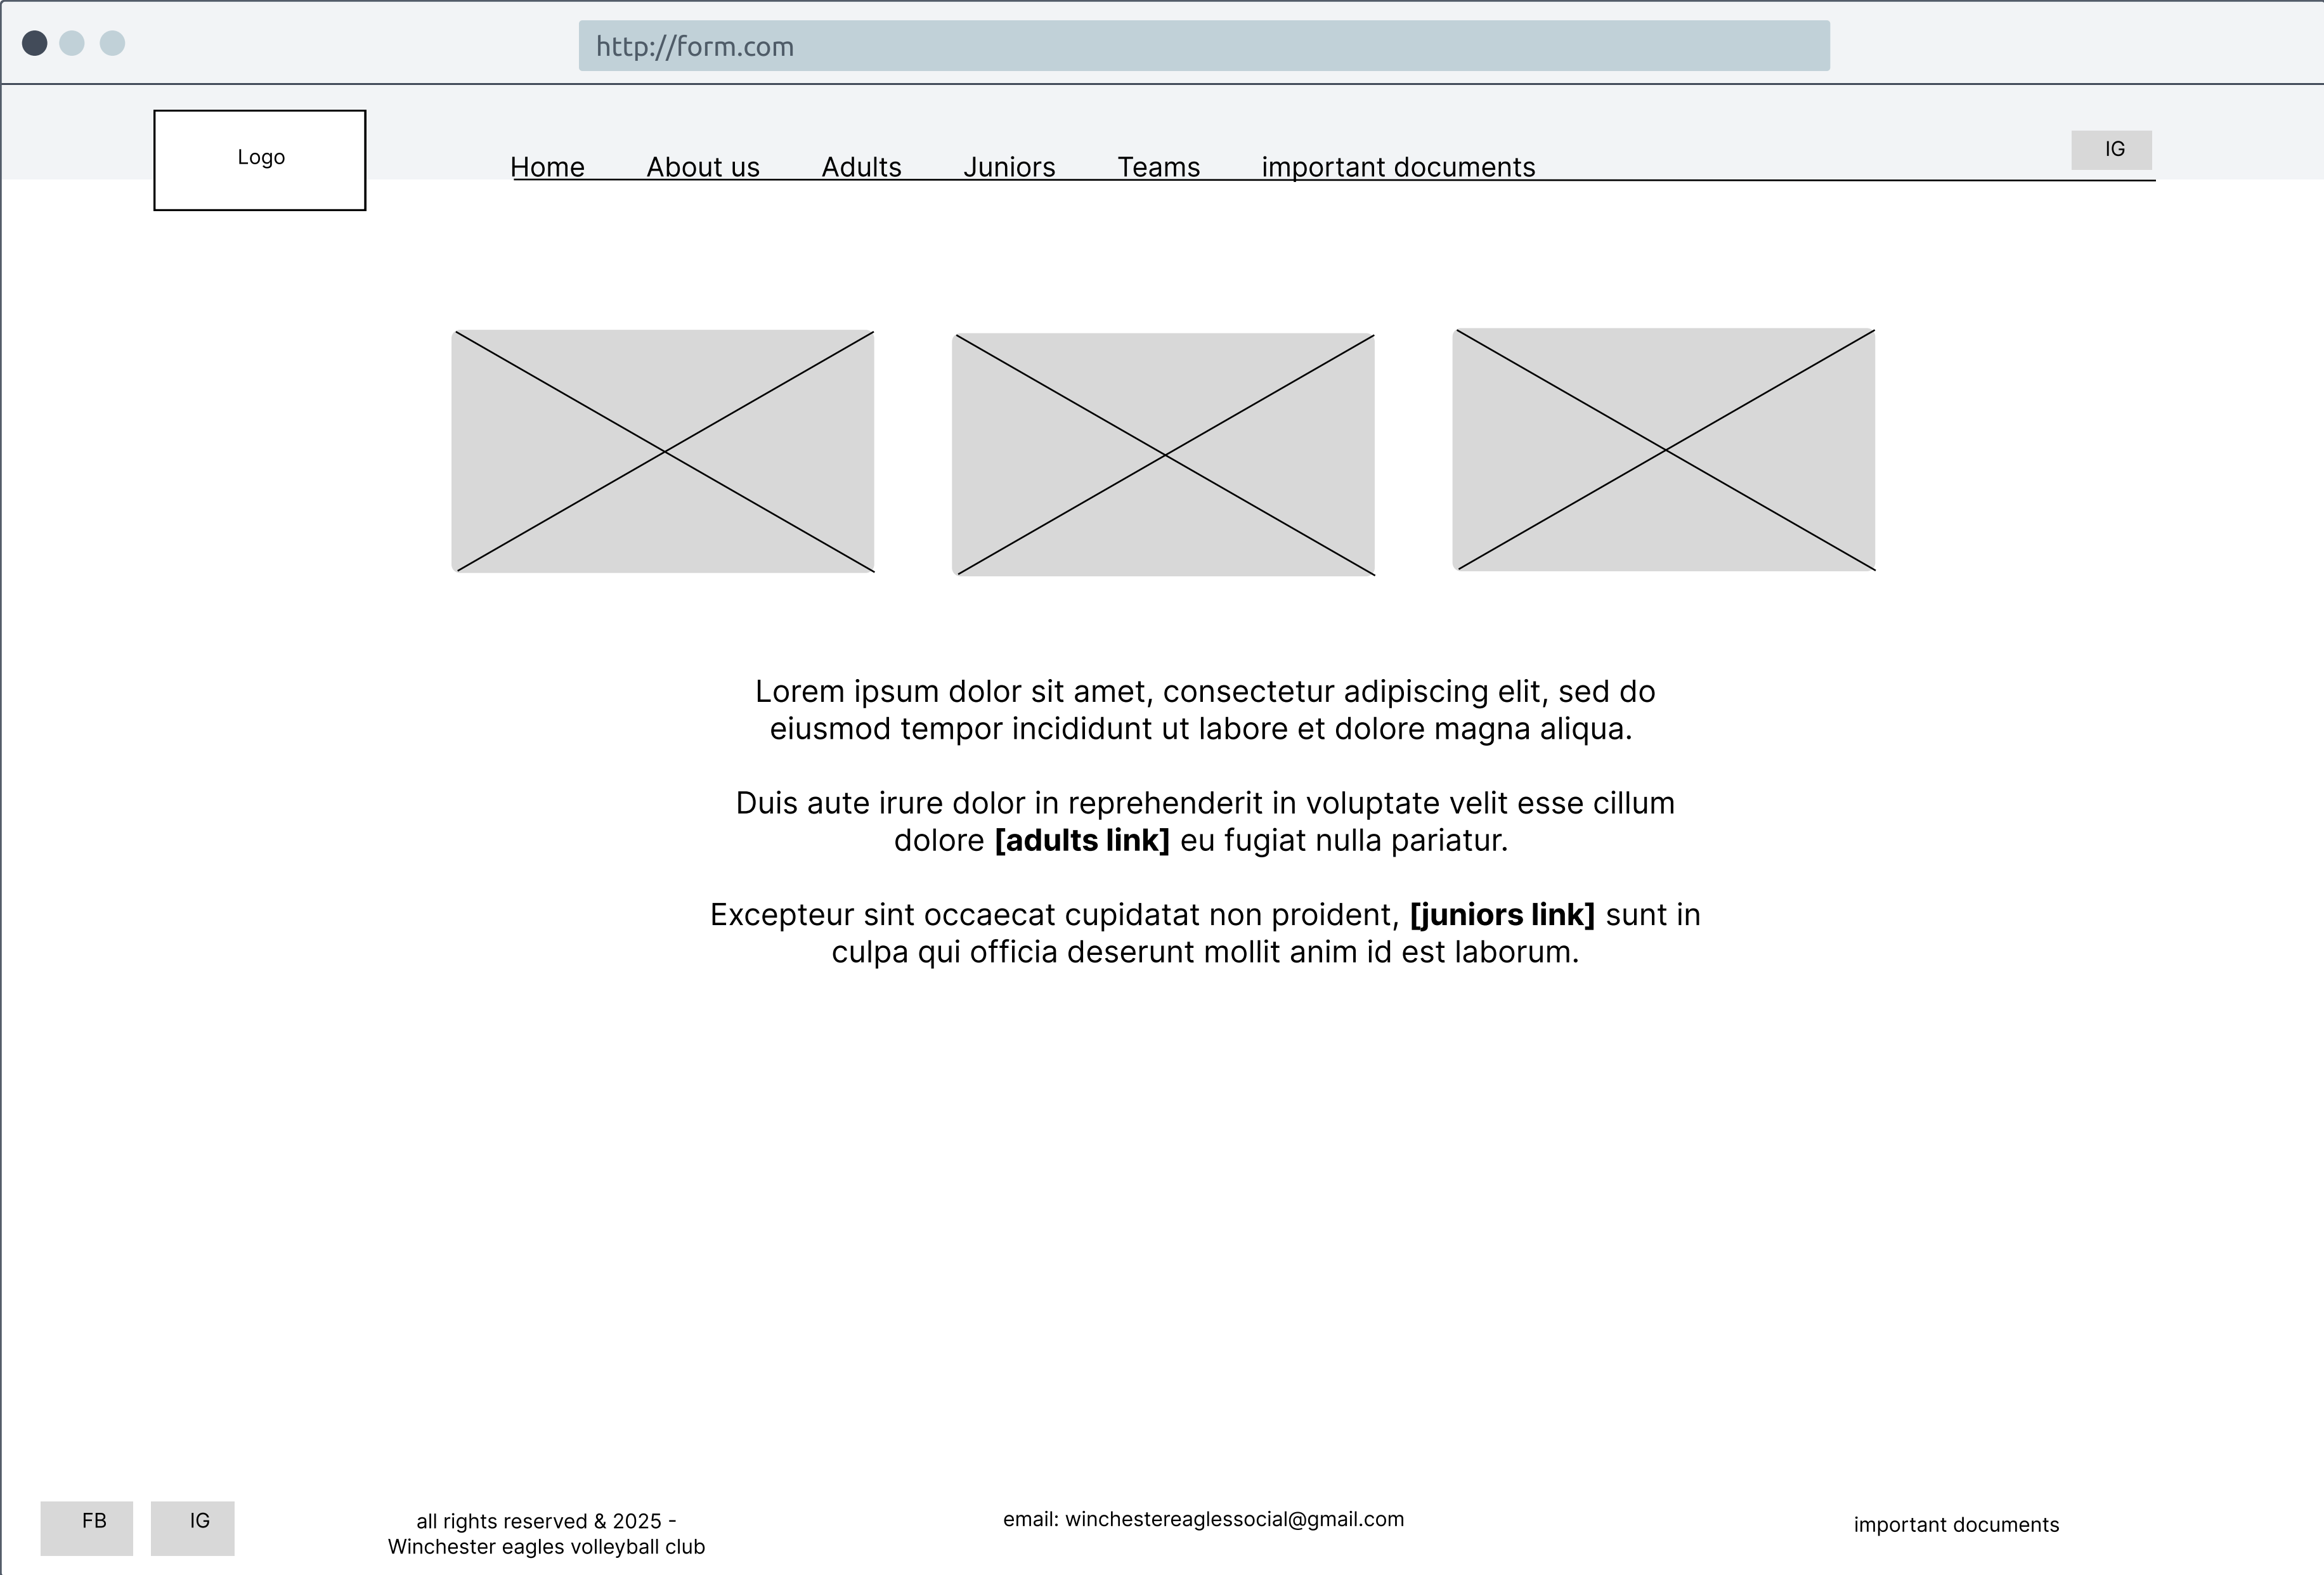

there's no fancy designs or rules here, just a list of all our downloadable documents

This is the home page on desktop resolution

I'm still doubtful about keeping the adults and juniors frame side by side other options are:

- keep them aligned vertically like on mobile
- aligned them all 3 side by side

(feedback welcomed <3)

This is the About us page on desktop resolution

on desktop the image carousel can show 3 pictures thank to the increase viewport space

important documents

This is the juniors’ sessions page on desktop resolution

same rules apply here as the mobile resolution.

sessions are placed sde by side to use the extra available space

This is the teams page on desktop resolution

the original design saw 2 competitions placed side by side, to better use the available viewport space

But personally i much rather prefer to align them vertically so it give both more importance to each competition and more space for photos.

with the gained space by only having one competition displayed at a time there is the possibility to have two smaller pictures side by side instead of just the one bigger picture.

I will try both when I'll be developing it but feedback is welcomed <3
